DTF Press Temps/Times

350 degrees – 15 seconds

Let cool for 2 minutes and peel

Press for 15 more seconds

What is Gang Sheets?

A Gang Sheet allows you to put as many images as you can fit within 14inx16in, and you do the cutting.

We have listed some possible sizes and quantities that will fit within 14x16.

What is DTF?

Direct-to-Film printing, also known as DTF printing, utilizes a garment printer to create film transfers which can then be applied to a large variety of substrates, including those that are traditionally challenging to decorate, such as polyester. Direct-to-film (DTF) printing is a heat-transfer based print process.

How long will a DTF transfer last before I have to press it to my garment?

DTF transfers have a shelf life of approximately 1 year.

How many washes will a DTF last on a shirt?

If pressed correctly 50+ washes. The transfer will likely outlast the garment.
